

# Children Optics

Conducting research with children is challenging. Your eye tracking solution needs to be reliable, flexible and easy to use. ASL offers various configurations, with synchronized analysis of live video, audio and digital data.

## Lightweight Head Mounted (H6)

- Adjustable headband
- Easy synchronization with other devices
- Real time data outputs

## Desktop/Remote Optics (D6)

- Unobtrusive monitoring
- No visible moving parts
- Versatility in stimulus display devices— monitor, TV, or even real world objects
- Quick and accurate head movement compensation
- Constant visual feedback throughout the entire tracking session
- Easy and flexible procedures

## Portable Tetherless Optics (Mobile Eye)

- Total freedom indoor and outdoor environment
- Portable and rugged enough to be used in real world applications
- Calibration can be done anywhere eliminating the need for pre-mapping calibration grids
