IPDT
FOR WIRE
WINDERS

Insulation Paper Dereeling/Tensioning

SPECIFICATIONS

Broomfield offers several standard and also custom designs of paper insulation handling equipment that may be incorporated into wire winding machine models. These can accommodate various configurations of insulation paper from a single full width roll to multiple smaller rolls for winding more than one coil simultaneously. Pneumatic tensioning helps keep the coil compact with controls at the front of the machine for easy operator use. A Roller assembly near the coil allows the operator to reach the leading edge of the paper from the front of the machine.

FOUR (4) PAPER ASSEMBLY TO WIND TWO (2) COILS SIMULTANEOUSLY WITH TWO (2) PAPERS PER COIL.
