# Multi-Wire Clamp Tensioner

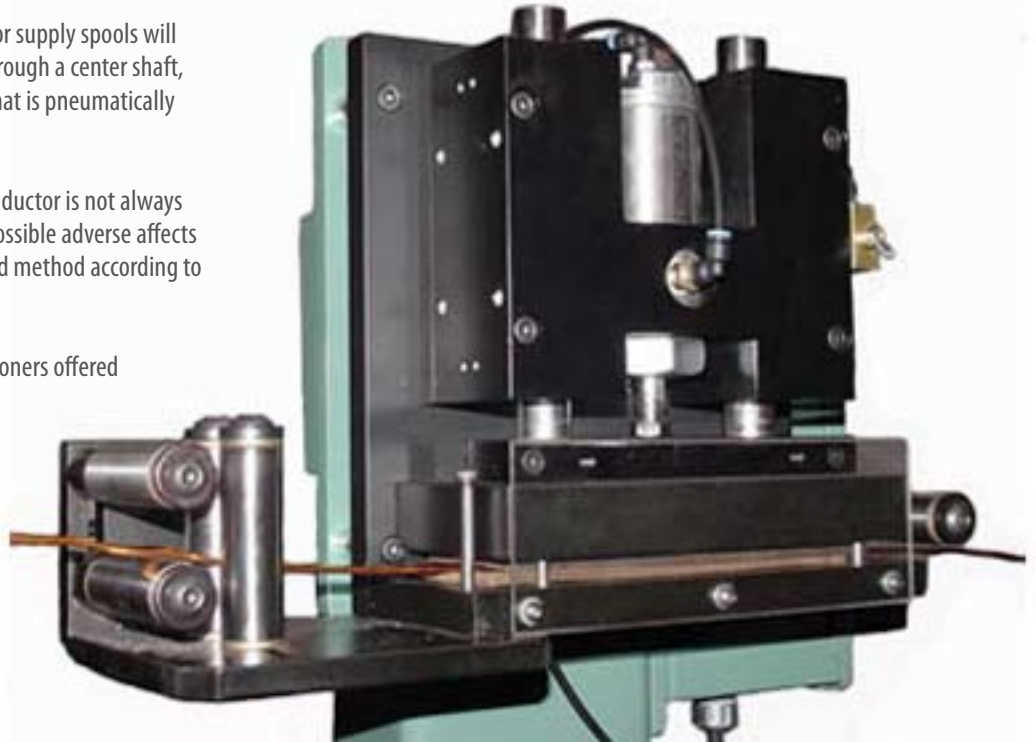

## SPECIFICATIONS

In applications where multiple rectangular conductor supply spools will not be tensioned directly upon each supply spool through a center shaft, Broomfield can provide a “**clamp type**” tensioner that is pneumatically powered.

This type of friction tensioning directly upon the conductor is not always advisable when the conductor is insulated, due to possible adverse affects to the insulation. However, where this is an approved method according to the materials and application, we do offer them.

Please feel free to review the other Broomfield tensioners offered on our website.
