

Professional. Responsive. Dedicated.

The Difference is Attitude

At Interstate Electrical Services, our experienced project teams provide a full range of electrical services, including building system installations, facility maintenance and 24/7 emergency service, to successfully meet your project needs, large or small.

Our talented, knowledgeable professionals are responsive to your project needs, and are dedicated to completing the job right the first time. Their cumulative experience, expertise and motivation is a powerful advantage, resulting in the on-time, quality workmanship you demand.

**"Interstate did an outstanding job on every level;
from inception to completion."**

Facility Manager, Progress Software

Electrical Services

Interstate Electrical Services delivers responsive, reliable services to clients in commercial, retail and manufacturing, as well as to property managers and general contractors. These comprehensive services include:

- > design build installations
- > engineering and design
- > facility maintenance
- > building automation system installations
- > 24/7 emergency call service
- > renovations and systems upgrades
- > fire alarm systems and testing
- > security card access systems

Our service projects include:

Maria Hall, Regis College: delivered a fully operational fire alarm system from design to installation within a six week deadline.

LTX Corporation: doubled their test cell capability and provided the electrical system to a new 400 ton chiller unit. The most significant challenge: installing two 500 amp feeders into the existing services in an eight hour window.

Coretek: maintained an extremely fast track schedule to get clean rooms up and running in just eight weeks.

Progress Software: designed and installed a new 200 KVA redundant UPS system that required re-configuring the computer room power source to this new system without interrupting their operations. The client allowed only 16 hours to perform this work.
