Electrical Construction and Services
Network Systems and Controls

Professional. Responsive. Dedicated.

The Difference is Attitude

Focused on Your Success

At Interstate/Southern New England, a professional, responsive and dedicated attitude is fundamental to the way we do business. It's inspired by the belief that our clients' success is our success. And it's characterized by our:

- ability to recognize project needs, then assign the right experienced professionals to deliver a quality job on-time,
- approach in making sure the right tools, equipment and systems are on-site to ensure the job is done right the first time,
- having motivated personnel who take pride in their work – and in your success, and
- long-standing promise to always fulfill our commitments, regardless of cost.

The Difference is Attitude

at Interstate/Southern New England.

Ready to Serve You Locally

At Interstate/Southern New England, our electrical construction, services and technology teams provide you with the full-service resources your project needs, large or small, including:

- design build and pre-engineered installations of electrical and building systems
- system installations, facility maintenance and 24/7 emergency service
- network cabling, fiber optic and telephone system installations
- building HVAC and control systems

“Thank you for all the energy and effort that was put into this project. Throughout the process, I was impressed with the commitment to detail and ownership of project responsibilities by your entire team, and by the tremendous spirit in which they completed the work.”

Regional Director, Starwoods Hotels & Resorts

Each of our talented, well-trained personnel is responsive to your project needs, and dedicated to maintaining our long-standing record of never missing a deadline or failing to meet a commitment. Their cumulative experience, expertise and motivation is a powerful advantage in providing the on-time, on-budget, quality workmanship you demand.

Performance excellence that's rewarded with our client's highest recommendation: repeat business.

Our office in Warwick, Rhode Island enables us to effectively maintain our commitment to the local communities we serve in Rhode Island and Connecticut. By first understanding your needs, then providing you with experienced professionals, we consistently ensure a quality performance. Over time, we've developed, tested and implemented practical, effective systems that enable our on-site project staff and electricians to:

- identify concerns affecting all trades,
- provide greater resource availability,
- focus on on-site safety awareness and training, and
- work with MEP consultants to resolve conflicts.

Electrical Construction and Services

Interstate/Southern New England provides electrical construction and services for technology, bio-technology, institutional, corporate, industrial, commercial, retail and health care clients.

Our comprehensive services include:

- > design build construction
- > fast track installation
- > engineering and design
- > facility maintenance
- > 24/7 emergency call service
- > building automation system installations
- > renovations and systems upgrades
- > fire alarm systems and testing
- > security card access systems

Delivering these types of projects on-time and on-budget requires a team that understands your needs and can adapt to program and schedule changes quickly and efficiently. A team that partners with you to expedite projects through creative delivery methods.

A sampling of recent projects includes:

Starwoods: 13,000 SF fast track renovation of retail space into a state-of-the-art reservation call center. We were responsible for the design and installation of new main electrical service, new 100KVA UPS system, and 300 linear feet of indirect/direct lighting, and completed the project in 10 weeks without any overtime or premium time cost to the owner.

Johnson & Wales: This pre-engineered project was completed in three months. The work involved the renovation of a classroom into a nutritional lab. Collaborating with other trades, our team was able to save time and cost by modifying the design to meet the challenging project conditions. Lighting, power and fire alarm systems were installed along with custom designed pedestals to provide power to the lab benches.

Middlesex Gases: This design build project was delivered on a fast track schedule. We were responsible for the electrical engineering, design and installation of the electrical and building systems which included: lighting, power and addressable fire alarm. The client realized savings by selecting a full-service contractor that could mobilize quickly and design the complete electrical system required for the project.

Network Systems and Controls

At Interstate/Southern New England, we're ready to meet all your technology needs with a full-service group dedicated to providing the highest quality design, installation and support of today's advanced network and automated control systems.

Network Systems: Interstate Network Systems is your complete source for LAN/WAN, copper and fiber optic cabling, network electronics and telephone systems. Our highly trained technicians are dedicated to delivering the job on-time with the highest level of skill and service in accordance with EIA/TIA and B.I.C.S.I. standards. We're certified by AVAYA technologies, AMP, Inc. and others to provide the caliber of workmanship, performance and quality products that our customers expect.

Controls: Our experienced project teams install advanced systems for HVAC, direct digital and industrial process controls including conveyor, instrument, pneumatic and electrical installations, calibration of instruments and impulse lines. We equip our well-trained technicians with the latest tools enabling them to deliver a responsive, professional performance often exceeding client expectations.

Our technology projects include:

R&R Donnelley & Sons: This project included the complete upgrade of the network system throughout the facility including the production area and office areas. Installation included fiber optic cables to production equipment, build-out of a main data center, several intermediate data facilities and horizontal cabling to offices for voice and data.

Starwoods Call Center: This ten week design build project included the installation of a complete network system. This installation included Category five station cabling to 125 workstations for voice and data.
