Tevron® Announces the Integration of CitraTest® APM with Foglight from Quest Software (Nasdaq: QSFT).

CitraTest® APM is the only integrated solution for conducting End-To-End performance monitoring based on the Real User Experience on ANY application that is accessible from a Windows PC including Thick Client, Citrix, Terminal Services, & Web applications.
_____

Nashua, New Hampshire, August 3, 2005 – Tevron® today announced the integration of its flagship

APM solution CitraTest® APM with the Quest Software solution Foglight.   Through the

deployment of CitraTest® APM, IT Managers and application owners can actively monitor the

End-To-End performance of every application that is accessible from a Windows based PC

including Thick Client, Citrix, Terminal Services, and Web based applications. Most importantly,

the End-To-End performance metrics are based on the Real User Experience and not a simulated

session. No other APM solution available in the market today offers support for every application

through a single license solution.   "By offering a seamless integration for Tevron's APM solutions

to Foglight from Quest Software, IT Managers have the unique ability to manage and monitor every

aspect of an application's health and performance. The combined solutions offer a very compelling

and all encompassing methodology for measuring and ultimately improving overall application

performance. In addition, crucial application downtime will be drastically reduced," says Jay

Labadini, Vice President of Business Development.
