Tevron Announces Continued Support for Comprehensive End-To-End Monitoring for all Citrix XenServer®, XenApp®, and XenDesktop® Environments.

Tevron Announces Continued Support for Comprehensive End-To-End Monitoring for all Citrix XenServer®, XenApp®, and XenDesktop® Environments.

Nashua, New Hampshire, March 1, 2008 – Tevron, a global provider of APM & business service monitoring solutions, today announced the continued & expanded support for comprehensive End-To-End Monitoring for all Citrix XenServer®, XenApp®, and XenDesktop® environments for its flagship monitoring solution, CitraTest® APM. Through the deployment of Tevron's APM solutions for all virtual computing environments, every application across the enterprise can be accurately measured and actively monitored. Further, Tevron's unique technology will deliver the ability to enforce all Service Level Agreements (SLAs) for any application deployed via any virtualization technology. "Because Tevron's APM solutions are completely independent of the application they are monitoring and how that application is delivered, for the first time, every application across the enterprise can be monitored with one cost effective solution, including all virtual environments. Every organization has numerous applications they need to monitor and our APM solutions can monitor them all. No other vendor offers such vast and all encompassing support. The days in which organizations have to pay a licensing fee for each application, each protocol they need to monitor, and each methodology of application delivery (virtualization) are over. This will result in the potential savings of

millions of dollars in licensing and maintenance fees. Through the use of Tevron's APM

solutions, organizations now have <u>one</u> all encompassing solution with <u>one</u> licensing fee that

can monitor any and every application across the enterprise. This includes all legacy

applications, client server applications, web applications, Citrix or Terminal Server hosted

applications, XenServer, XenApp, XenDesktop, VMware hosted applications, terminal

emulation...every application.   With the expanding support of virtualization technologies,

Tevron continues to provide its customers with secure and flexible solutions. This

flexibility is a must to meet the demanding needs of today's global enterprises", explains

Jay Labadini, Vice President at Tevron. To learn how CitraTest® APM can assist you with

your APM & monitoring requirements, call 1.702.518.7435 or visit www.tevron.com.

ABOUT TEVRON, LLC

Tevron, LLC is a pioneer in a new class of all encompassing APM solutions. Tevron's

mission is to provide automated monitoring solutions that support every application across the

enterprise while seamlessly integrating into current management methodologies. Tevron's

technology has completed the complex APM puzzle.
